Oct 23, 1996 Chattanooga, Tennessee USA

Greetings Ambar. This evening I returned from outage work in Kentucky. I have been gone for three weeks. I received your October 18 and 16 e-mails. I will call Saumyendra tomorrow and get the home number. It is still planned that I will go to Tampa in early November for an electrical power conference. Peggy will join me. In Tampa I will rent her a car so that she can take Rupa sight seeing all over Tampa, Clear Water, and some special sights such as at Tarpan Springs. That is my plan, God willing.

Ambar. You have not yet told me what "jahanta" means.

Regarding the e-mail addresses: My government business address is ndowning@tva.gov.

My personal address is: goloka@utc.campus.mci.net

I prefer that you always send the copy to the tva address. That way I will always receive the messages.

Ambar. In your Oct. 16 letter you closed with "Anupam" What does that mean? I know your nick-name is boom-boom. But does "Anupam" have some greater significance?

Ambar. Has Joy had the opportunity to visit RKM at Deoghar? Also, what do you think of the idea of the RKM at Rahara? Do you think I am being realistic? I now have 3.5 years to go.

Come Monday I will be leaving again to go to our large Cumberland Fossil Plant. These units are 1350 megawatts each! They are some of the largest in the world. I will be doing a condition assessment to evaluate their reliability. Then I return to our Paradise Fossil Plant to do major repairs on a 750 megawatt unit. November will be quite busy. But it is always that way - Sept. through March are my busy months.

OK. take care. We will keep you informed of our contacts with Mr. and Mrs. Bhattacharyya.
